- Two German motor-boats ("Motovedete"),
One ex-German tug,
Several small motor-boats armed with MGs,
Several sailing boats fitted with motors and
armed with MGs.

2. Yugoslav and Soviet technicians are directing the construction of bases, some of which are already completed. In Durazzo, a mole 250 meters long is under construction, and another is projected to accommodate vessels of medium tonnage. In Valona, a new mole for motor sailing vessels has been built; another for vessels of medium tonnage is nearly complete.
3. Recently a large "vedette" was adapted for mine laying with Soviet and Yugoslav personnel.
4. Intensive work on the construction of fortifications for the defense of bases and the coast is in progress. These works form part of a general plan of defense, and are directed by Soviet and Yugoslav experts. The works consist of barbed wire entanglement, trenches, artillery positions, minefields, bunkers and underground galleries.
5. The planned defense zones are Durazzo, Valona, Saseno, Porto Palermo, Sarandë (Santi Quaranta) and Butrint.
6. Works on the island of Saseno are particularly important, and are directed by Soviet experts. They are carried out with the utmost secrecy. It is claimed to be the Soviet intention to transform the Saseno-Valona area into a powerful bastion which would be capable of dominating the entrance to the Adriatic. Caves are being converted for use as underground submarine pens.
7. The entire area around the island is stated to be mined, and between Saseno and Capo Linguetta an anti-submarine boom with mines has been placed.
